Kitchenaid superba 27 oven self cleaning instructions

Keeping your oven clean is an important part of kitchen maintenance. In addition to looking great, a clean oven also helps prevent smoke and unpleasant scents from entering your home—or your food. If you don't have time to manually clean your oven, its self-cleaning function can help. Find out how a self-cleaning oven works and follow the tips below on cleaning a self-cleaning oven. Don't forget to review the self-clean oven instructions for your model in your Use and Care guide, as well. If you're looking for a self-cleaning oven, KitchenAid brand offers ovens with self-cleaning capabilities that can make baking and cleaning a simple task. Self-cleaning ovens use high temperatures to help remove food spillage and grime that accumulates over time. The very high temperatures burn cooked-on food to a powdery ash that can more easily be wiped away. Self-cleaning cycles vary in length depending on the level of soil and are meant to provide a deep clean from time to time. Some ovens also feature a steam-clean cycle that uses moisture to soften cooked-on splatters and spills. Steam cleaning helps maintain your oven in between the deep cleaning provided by a heat based self-cleaning cycle. **IMPORTANT:** Additionally, if you have pets, you'll want to make sure that the kitchen is well ventilated and keep them in a separate room while the oven is self-cleaning, as their senses of smell are more sensitive than ours. While self-cleaning cycles vary by oven model, here are some things you can expect when using a KitchenAid® oven with this cycle. If you do not have a KitchenAid brand self-cleaning oven or range, your cycle may run a little differently and you should consult your owner's manual for specifics. The oven door will lock approximately 6 seconds after the cycle has been started. "Heat," "On," "Locked," and "Clean" will appear on the display. The door will not unlock until the oven cools. The cycle time includes a 30-minute cool-down time. When the cycle is complete and the oven cools, "End" will appear on the display and "Locked" will disappear. The heating and cooling of porcelain on steel in the oven may result in discoloring, loss of gloss, hairline cracks and popping sounds. This is normal and will not affect the performance of the appliance. Before starting the self-cleaning cycle, you'll need to take a few minutes to prepare your oven, cooktop and storage drawer. Follow the step-by-step instructions below. **SUPPLIES:** 2 clean cloths (if hand-cleaning your oven) Baking soda Water Spray bottle with vinegar or lemon juice First, remove the oven racks, broiler pan, grid, cookware and bakeware, as well as any foil or oven liners from the oven. Using a damp cloth, hand-clean inside the door edge and the 1½ in. (3.8 cm) area around the inside oven cavity frame, being careful not to move or bend the gasket as this area does not get hot enough during self-cleaning to help remove soil. Do not let water, cleaner or any other liquid enter slots on the door frame as you wipe out any loose soil to help reduce smoke and avoid damage. Step 2: Clean the Oven Window Cleaning the window glass prior to self-cleaning the oven will help reduce unsightly burned-on residue. Soil left on glass prior to self-cleaning may leave dark streaks or stains. Most of these stains can be removed by using a glass cleaner and scrubbing with a very fine (000) steel wool pad. Step 3: Prepare the Cooktop and Storage Drawer Remove any plastic items from the cooktop to prevent melting as well as any items from the storage drawer. Before starting the self-cleaning cycle, make sure the door is closed completely or it will not lock and the cycle will not begin. Step 4: Start the Self-Cleaning Cycle To start the cycle, press the Clean button and select the desired clean setting or cycle time before pressing the Start button. When the cycle ends, let the range cool and wipe out excess ashes from the clean cycle. Note that this step is specific to select KitchenAid® models and this step may vary depending on what kind of oven you have. The self-cleaning cycle on your oven is automatic, but that doesn't mean you should "set it and forget it." The tips below will help you achieve the best results. Clean your oven regularly. If you prefer the self-cleaning cycle to manually scrubbing, try to self-clean the oven before it becomes heavily soiled. Heavy soil results in longer cleaning and more smoke. Keep the kitchen well-ventilated by using the range hood like these available from KitchenAid brand during the Self-Cleaning cycle to help get rid of heat, odors and smoke. Do not block the oven vent(s) during the self-cleaning cycle. Air must be able to move freely. Do not clean, rub, damage or move the oven door gasket. The door gasket is essential for a good seal. Please see the oven cleaning section in your Use and Care Guide for specific instructions on how to clean your oven. Absolutely. Even self-cleaning ovens require manual cleaning every so often. While self-cleaning cycles are meant to help make cleaning easier, using this function is not absolutely essential. To manually clean your oven, create a thin paste using 3 tablespoons of water and ½ cup of baking soda to spread throughout the (cool and empty) oven cavity. Let sit anywhere from 20 minutes to overnight, depending on the level of soil. To remove the paste, spray white vinegar or lemon juice and wipe with a damp cloth and a plastic scraper for stubborn spots. Manual cleaning is also a good option if you want to avoid using high temperatures. Another way to keep your oven clean without high-heat cycles is the Aqualift® feature available on select KitchenAid® ovens and ranges. This unique cycle cleans your oven in less than an hour without odors and at a temperature below 200°F. This innovative system combines low heat with water to release baked-on spills. Can You Use Oven Cleaner on a Self-Cleaning Oven? You should not use any commercial oven cleaner, since they may damage the interior of the oven, and may reduce the effectiveness of the self-cleaning cycle over time. Can you Run a Self-Cleaning Oven While Home? You should only use the self-cleaning function when you're home. These cycles can reach extremely high temperatures which may cause smoke or fumes, so it's important to remain attentive and stay close by, just like anytime you're using your oven. If you have any pets in your home, it's best to keep them out of the kitchen and in a well-ventilated area, as their senses of smell are more sensitive than ours. To download or view product literature for your KitchenAid® appliance, please visit our Manuals and Literature page. **OVEN CARE**Burn Hazard Do not touch the oven during the Self-Cleaning cycle.Keep children away from oven during Self-Cleaning cycle.Failure to follow these instructions can result in burns. **IMPORTANT:** The health of some birds is extremely sensitive to the fumes given off during the Self-Cleaning cycle. Exposure to the fumes may result in death to certain birds. Always move birds to another closed and well-ventilated room. Self-clean the oven before it becomes heavily soiled. Heavy soil results in longer cleaning and more smoke. Keep the kitchen well-ventilated during the Self-Cleaning cycle to help get rid of heat, odors, and smoke. Do not block the oven vent(s) during the Self-Cleaning cycle. Air must be able to move freely. Depending on your model, see "Oven Vent" or "Oven Vents" section. Do not clean, rub, damage or move the oven door gasket. The door gasket is essential for a good seal. Prepare Oven:• Remove the broiler pan, grid, cookware and bakeware and, on some models, the temperature probe from the oven. • Remove any foil from the oven because it may burn or melt, damaging the oven. • Remove oven racks to keep them shiny and easy to slide. See "General Cleaning" section for more information. Hand clean inside door edge and the 1 1/2 " (3.8 cm) area around the inside oven cavity frame, being certain not to move or bend the gasket. This area does not get hot enough during self-cleaning to remove soil. Do not let water, cleaner, etc. enter slots on door frame. Use a damp cloth to clean this area. Wipe out any loose soil to reduce smoke and avoid damage. At high temperatures, foods react with porcelain. Staining, etching, pitting or faint white spots can result. This will not affect cooking performance. How the Cycle Works **IMPORTANT:** The heating and cooling of porcelain on steel in the oven may result in discoloring, loss of gloss, hairline cracks and popping sounds. The Self-Cleaning cycle uses very high temperatures, burning soil to a powdery ash. The oven is preset for a 3 hour 30 minute clean cycle, however the time can be changed. Suggested clean times are 2 hours 30 minutes for light soil and between 3 hours 30 minutes and 4 hours 30 minutes for average to heavy soil. Use the following chart as a guide to determine the desired cleaning level. **CLEANING TOTAL CLEANING TIME LEVEL** (includes a 30 minute cool down time) 1 (Quick) 2 hours 30 minutes 3 hours 3 (Regular) 3 hours 30 minutes 4 hours 5 (Max) 4 hours 30 minutes Once the oven has completely cooled, remove ash with a damp cloth. Do not wipe down any of the inside surfaces until the oven has completely cooled down. Applying a cool damp cloth to the inner door glass before it has cooled completely could result in the glass breaking. The oven lights will not work during the Self-Cleaning cycle. On double oven models, only one oven can self-clean at a time. If one oven is self-cleaning, the other oven cannot be set or turned on. **NOTE:** The oven has a 2 speed cooling fan motor. During self-cleaning the fan(s) will operate at its highest speed to increase airflow to better exhaust the hotter air through the oven vent(s). An increase of noise may be noticeable during and after the self-cleaning cycle until the oven cools. To Self-Clean: Before self-cleaning, make sure the door is closed completely or it will not lock and the cycle will not begin. 1. On double ovens only, touch UPPER OVEN or LOWER OVEN. The cavity symbol will indicate which oven was chosen. 2. Touch SELF CLEAN. Touch SELF CLEAN repeatedly to set a clean time other than 3 hours and 30 minutes. The clean time can be set between 2 hours and 30 minutes and 4 hours and 30 minutes. Number keys cannot be used to set a clean time. 3. Touch START. The oven door will automatically lock and "DOOR LOCKED," the start time and stop time will appear on the oven display. The door will not unlock until the oven cools. When the cycle is complete and the oven is cool, "self clean complete" will appear on the oven display and "DOOR LOCKED" will disappear. If enabled, end-of-cycle tones will sound, then reminder tones will sound every minute. 4. Touch OFF, or UPPER OVEN OFF or LOWER OVEN OFF, or open the oven door to clear the oven display and/or stop reminder tones. 17
